

Our Company

ABOUT US

FERPOL founded in 2004 as a family company. Main profile is manufacturing plastic PVC connecting elements for concrete manholes in Our production plant at Miskolc.

Through long term market experience, expertise, as well as reliability FERPOL has developed itself into a wellknown plastic product supplier for Multinational Partners.

CERTIFICATES AND QUALITY MANAGEMENT

ISO 9001 STANDARD

ISO 14001 STANDARD

NATIONAL TECHNICAL APPROVAL A-145/2015 (NMÉ)

THE COMPANY OFFERS

- ✓ Plannable Costs for Longterm Relationships
- ✓ High Quality and Durability with NMÉ Quality Certificates
- ✓ Decreasing Delivery Time assisted 2 months stock for Flexibility
- ✓ Environment Protection with Recycled Raw Materials

RECYCLING – ENVIRONMENTAL PROTECTION

The Company is comitted to the values of sustainable development and environment protection, therefore we recycle every input materials to lower solid waste during production. The use of secondary raw materials means no quality decrease! PVC-U waste consists bigger pieces that are recycled by a grinder machine. The raw materials are again 4-6 mm regranulates. Recyclement level is high, close to 99%.

WAREHOUSE

Our warehouses give the flexibility. Usually keep two months of products in it to react rapidly for the demands of customers In time succes of deliverys are above 95%.

FUTURE PLANS

- Increase machinery number
- Operator trainings
- Common research with strategic partners
- New service introduction
- SMART technologies
- Robot tech

PRODUCTION HALL

In 2015, We proudly opened Our new production hall parallell with the new technology, that increase reliability, quality of Our great products. The NEW 320t clamp force injection mould machine increase the volume with efficient energy consumption.

SERVICES

- ✓ Raw material distribution
- ✓ Common research and development
- ✓ Mould planning
- ✓ Tool manufacturing
- ✓ Mass production
- ✓ Mould injection as polimer processing technologies
- ✓ Storing moulds and maintenance
- ✓ Finish product packaging
- ✓ Transport

PLASTIC PROCESSING TECHNOLOGIES

Our family company in the past 10 years focused the resources to be better at polimer processing technologies. We work as a strategic supplier for multinational companys. Our newly developped products are created in the new production hall (2015) with injection mould machines. The company can handle 3 shifts work schedule according to increased cutomer needs.

We are also prepared to make injection mould plastic parts for new customers until 320 tonnes clamp force and 1000 cm3 swept volume in the production plant at Miskolc

GRANULE TYPES

LDPE, HDPE, PP, PA, PS, ABS, TPE, PC, PVC, TPU

NEW PRODUCTION HALL

In 2017 a project related to a new cutting plant was implemented. The function of this plant is closely connected to our existing injection moulding and special parts manufacturing activities.

In our new production hall highly qualified specialists perform cutting by up-to-date CNC controlled machines. With our quality-oriented approach and calibrated measuring devices we comply with the quality requirements specified by our customers. When constructing the new hall, we took the needs of the personnel and technological requirements into consideration, creating a people-oriented, likeable environment.

OUR ACTIVITIES

Purchase of raw materials, storage
Chopping

Milling
Turning

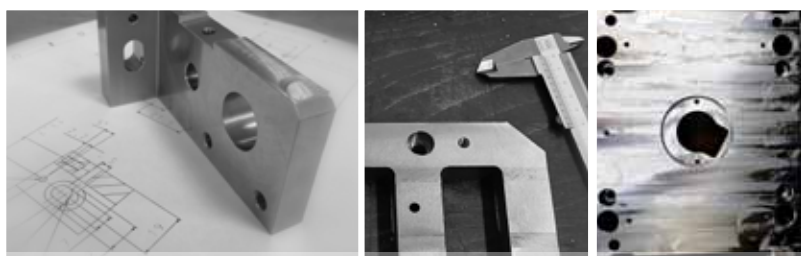

Surface grinder
Heat treatment

Custom manufacture
Series production

REFERENCES

We provide our partners with custom-made products first of all, and we undertake to manufacture subassemblies of injection moulding tools, in addition to components of automotive and aeronautical devices.

OUR FUTURE PLANS

Our long-term plans include further expansion of our machine pool, in harmony with our customers' short- and medium-term plans and needs.

In order to comply with high requirements and accuracy, we support the development of our specialists through continuous trainings.
